

Cooling capacity: 40 to 161 kW

Cooling only

USE

The new generation of CONDENCIAT condensation units is the solution for all split-system direct expansion cooling applications encountered within the office, healthcare, industry, administration, commercial and shared residential sectors.

These units are designed for outdoor installation and require no special protection against adverse weather conditions.

CONDENCIAT is optimised to use ozone-friendly HFC R410A refrigerant.

This units are designed to be connected on-site to one or more direct expansion exchangers of the following type:

- Direct expansion air treatment unit air coil
- Separate shell and tube or brazed plate type water cooling evaporator.

RANGE

CONDENCIAT, CD series

Cooling only version.

DESCRIPTION

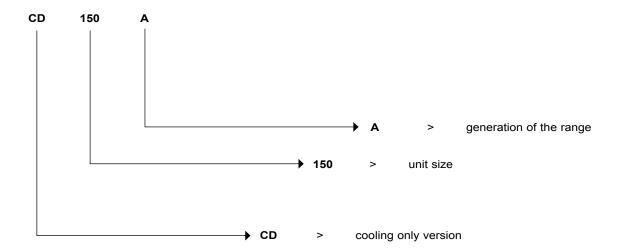

CONDENCIAT units are supplied as standard with the following components:

- Hermetic SCROLL compressors
- Air-cooled exchanger with copper tube coil, aluminium fins and axial fan motor assembly
- Electrical power and remote control cabinet:
 - 400V-3ph-50Hz (+/-10%) general power supply + earth
 - transformer fitted as standard on the machine for supplying the remote control circuit with 24V
- Electronic control module
- Casing for outdoor installation

The entire CONDENCIAT range complies with the following EC directives and standards:

- Machinery directive 2006/42/EC
- Electromagnetic compatibility directive 2014/30/EC
- EMC immunity and emissions EN 61800-3 "C3 and C1"
- Low voltage directive 2014/35/EU
- RoHS 2011/65/EU
- Pressure equipment directive (PED) 2014/68/EU
- Machinery directive EN 60-204 -1
- Refrigerating systems and heat pumps EN 378-2

DESCRIPTION

CONFIGURATION

CD	Standard
CD, XLN option	Standard Xtra Low Noise

→ Air-cooled condensation units

DESCRIPTION OF THE MAIN COMPONENTS

Compressors

- Hermetic SCROLL type
- Electronic motor overheating protection
- Crankcase heater
- Mounted on anti-vibration mounts

Air-cooled exchanger

- Air-cooled exchanger with copper tube coil, aluminium fins and metallic protection grilles
- axial fans with composite blades offering an optimised profile, fixed speed as standard or variable speed as an option
- motors IP 54, class F

Refrigerating accessories

- Dehumidifier filters
- Hygroscopic sight glasses
- Solenoid valves

Control and safety instruments

- Low and high pressure sensors
- Safety valves on refrigerating circuit

Electrical cabinet

- Electrical cabinet with IP 44 protection rating
- A connection point without neutral
- Front-mounted main safety switch with handle
- Control circuit transformer
- 24V control circuit
- Fan and compressor motor circuit breaker
- Fan and compressor motor contactors
- Microprocessor-controlled electronic control module
- Wire numbering
- Marking of the main electrical components

Frame

Frame made from RAL7035 light grey & RAL 7024 graphite grey painted panels.

Control module

The electronic control module performs the following main functions:

- Management of compressor operation
- Management of fan operation
- Actuation of evaporator evacuation solenoid valves (valves delivered in a kit with the machine)

Remote control

Several contacts are available as standard, enabling the machine to be controlled remotely by wired link:

- Automatic operation control: when this contact is open, the machine stops
- Compressor stage control
- Fault reporting: this contact indicates the presence of a major fault which has caused one or both refrigerating circuits to stop
- Operational status reporting indicates that the unit is in production mode.

→ Air-cooled condensation units

CONDENCIAT CD

AVAILABLE OPTIONS

Options	Description	Advantages	CD
Condenser with anti-corrosion post-treatment	Copper/aluminium coils supplied with Blygold Polual treatment applied	Improved corrosion resistance, recommended for industrial, rural and marine environments	•
Corrosion protection, traditional coils	Fins made of pre-treated aluminium (polyurethane and epoxy)	Improved corrosion resistance, recommended for moderate marine and urban environments	•
Xtra Low Noise	Sound absorbing enclosure for the compressor and low speed fans	Reduces the noise level by reducing the fan speeds	•
Soft Starter	Electronic starter on each compressor	Reduces the start-up current	•
Winter operation (down to -20°C)	Controls the fan speed	Stable operation of the unit when the air temperature is between 0°C and -20°C.	•
Suction and liquid line valves	Ball valves on the suction and liquid line	Unit isolated from the rest of the refrigerating circuit	•
Compliance with Russian regulations	EAC certification	Compliance with Russian regulations	•
Replaceable filter dryer	Filter dryer with cartridge to replace the hermetic filter	Easy filter replacement without draining the refrigerating circuit	•
Anti-vibration mounts	Elastomer anti-vibration mounts to be fitted underneath the unit	Isolates the unit from the building, preventing vibrations and noise from being transmission to the building. Must be used in conjunction with a flexible connection on the water side	•
Flexible refrigerating sleeves	Flexible connections on the refrigerant pipes	Easy to install. Limits the transmission of vibrations to the refrigerant network	•

Air-cooled condensation units

INTELLIGENTLY-DESIGNED ACOUSTICS

To comply with the various restrictions on integration, the CONDENCIAT has two sound finish levels enabling it to be easily integrated into a number of zones without causing disruption to users or their neighbours.

Basic version

The distinguishing feature of the CONDENCIAT range is its rigorous design incorporating "noiseless" assembly techniques to reduce vibrations and sources of noise:

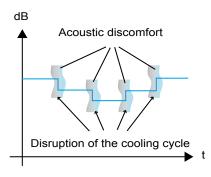

- New generation scroll compressors with a continuous scrolling motion to lessen vibrations
- Compressor structure separated from the unit by antivibration mounts
- Pipes separated from the unit structure
- Fans made from a synthetic material, with aerodynamic blades offering an optimised profile. Optimised coil-fan combination, the result of many hours of study of the thermal and acoustic properties in our Research and Innovation Centre, to ensure a linear flow of air without turbulence, to limit noise to an acceptable acoustic spectrum.
- The controller automatically adjusts the fan air flow rate according to the outdoor air temperature and the unit's load rate which enables the sound level to be significantly reduced, particularly at night, mid-season, morning and evening, which totals more than 75% of the time the unit is used

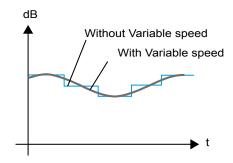

Xtra Low Noise option

In this version, the compressors are housed in jackets and the fan rotation speed is reduced whilst ensuring the output and thermal performance remain optimised.

Acoustic signature

As important as the sound power level, the acoustic signature reflects the noise disturbance generated by the unit.

The CONDENCIAT can be equipped as an option with a variable speed motor, enabling a soft start of the fan (all-season operation).

It avoids the increases in noise linked to the on/off sequences, thereby improving the unit's acoustic signature.

With all these benefits and its two acoustic finish levels (Standard and Xtra Low Noise), the CONDENCIAT can be integrated into any site, ensuring any constraints in terms of the sound environment can be met.

SOUND LEVELS

OPERATING RANGE

CONDENCIAT units have a broad field of application, enabling them to meet a range of cooling requirements in the most varied of climates.

Operating limits

Multi-climate: -20°C to +48°C

CONDENCIAT units are equipped as standard with all the management devices and algorithms to enable all-season operation down to temperatures of 0°C, with the option of extending this to -20°C if the variable speed fan option is selected.

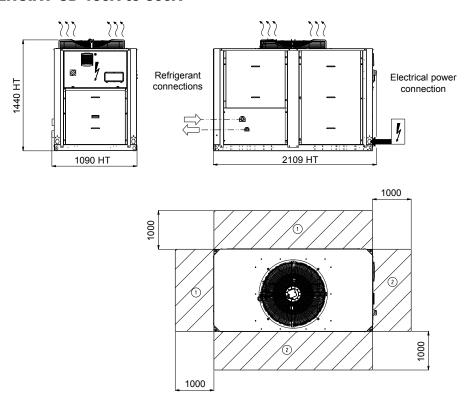

Saturated temperature at the compressor intake (dew point), °C

Standard operation
Winter operation option

INSTALLATION RECOMMENDATIONS

Lifting and handling

The utmost safety precautions must be taken when lifting and handling the unit.

Always follow the lifting diagram on the unit and in the instruction manual.

Before attempting to lift the unit, make sure the path leading to its intended location is free from obstacles. Always keep the unit vertical when moving it. Never tip it or lie it on its side.

Choosing a location for the unit

CONDENCIAT units are designed for outdoor installation. Special attention should be paid to ensure sufficient free space (including at the top) to allow maintenance. The unit must be placed on a perfectly level, fireproof surface strong enough to support it when ready for operation. Noise pollution from auxiliary equipment should be studied thoroughly.

Potential noise transmission routes should be studied, with assistance from an acoustical engineer if necessary, before installing the unit. It is strongly recommended that flexible couplings are placed over pipes and anti-vibration mounts are fitted underneath the unit (equipment available as an option) to reduce vibrations, and the noise this causes, as much as possible.

Fitting the supplied accessories

A number of optional accessories, supplied in the unit, may be installed on the unit on site.

You must follow the instructions in the manual.

Electrical connections

You must follow the instructions in the manual. All information concerning electrical connections is stated on the wiring diagrams provided with the unit. Always follow this information to the letter.

Electrical connections must be made in accordance with best current practices and applicable standards and regulations. Electrical cable connections to be made on-site:

- Electrical power supply to unit
- Contacts available as standard enabling the machine to be controlled remotely

It should be noted that the unit's electrical system is not protected against lightning strikes.

Therefore devices to protect against transient voltage surges must be installed on the system and inside the power supply unit.

Refrigerant connections

You must follow the instructions in the manual.

Work must be carried out in accordance with the most stringent industry guidelines, which generally include the following:

- Careful study of the pipe routing (slope, trap and diameter) to facilitate the return of oil to the compressor
- Fitting of liquid and suction refrigerant pipes between the direct expansion coil and the CONDENCIAT condensation unit
- Fitting of refrigerating accessories on the direct expansion coil (expansion device, electrical valve).

- The length of the refrigerant pipes between the two devices must be as short as possible, with as few elbows as possible, to minimise pressure drops. Maximum linear length = 30 metres; maximum height difference = 16 metres. If in doubt, consult our technical service.
- Insulation of the intake pipe
- Evacuation of the refrigerating circuit, refrigerant charge and system start-up.
- The condensation unit, refrigerant pipes and direct expansion evaporator assembly must be assembled in accordance with the pressure equipment directive PED 2014/68/EU. The CIAT condensation unit and evaporators comply with this directive.
- The devices must be connected up using anti-vibration sleeves.

System start-up

CIAT or a CIAT-approved firm must perform system start-up on the units.

You must follow the instructions in the manual.

List of system start-up checks (non-exhaustive):

- Correct siting of unit
- Power supply protections
- Phases and direction of rotation of the fans and compressors
- Wiring connections on unit
- Checking of the refrigerant connection between the condensation unit and the evaporator (maximum linear length, maximum height difference, etc.)
- Pressure in the refrigerating circuit
- Operating readings

Maintenance operations

Specific preventive maintenance operations are required at regular intervals and should be performed by CIAT-approved contractors.

The operating parameters are read and noted on a "CHECK LIST" form to be returned to CIAT.

It is essential to comply with the instruction manual.

You must take out a maintenance contract with a CIAT-approved refrigeration equipment specialist. Such a contract is required even during the warranty period.

This document is non-contractual. As part of its policy of continual product improvement, CIAT reserves the right to make any technical modification it feels appropriate without prior notification.
